Carrier Status 214 Notes

<u>Purpose</u>

The Transportation Carrier Shipment Status Message (EDI=214) is sent from the trading partner to General Mills. See two status's listed in the key elements below – you need a trigger mechanism in your application to send this data.

<u>Note:</u> that this transaction is version **4030** UCS.

<u>Key elements:</u>

B1002 = Shipment number (PO number if from vendor)
L1101 = Delivery number (PO number if from vendor)
AT701 = qualifier
      AM = Truck is loaded and ready for departure
      X1 = Truck has arrived at warehousing location
AT705 = date
AT706 = time

<u>Further Status Definition:</u>

AM = Truck is loaded and ready for departure
This status is sent only for <u>outbound</u> loads. It tells General Mills that a load is ready to ship and we can send a notice to the tractor to pick up the trailer. Sent before the Notice of Shipment (EDI=945) which is triggered when it leaves the yard.

X1 = Truck has arrived at warehousing location
This status is sent only for <u>inbound</u> loads. It tells General Mills that a truck has arrived (product is in the yard) even though it may be some time before it is off the truck. Sent before the Notice of Receipt (EDI=944) which is triggered when truck is actually unloaded. As of April 2019, functionality for reporting when the load comes from a <u>vendor</u> was also included.

<u>Examples:</u>
Load Ready = AM

```
ST*214*590310001~
B10*NA*81811439*ROEV~
LX*1~
L11*2089040841*DO~
AT7*AM*NS***20180311*105700*L~
MS2*ROEV*67076~
SE*7*590310001~
```

Load Arrived = X1

- Example for interplant order

```
ST*214*639430001~
B10*NA*0081818385*SHKE~
